Scholars Academy

Cobotic Cooperation

Caroline was very aware of the disadvantages of the robotic workforce. Caroline read an article in a magazine that was specifically about inefficient communication between automated devices and human workers in companies. She realized that her office also had those issues, and went to her manager to see if any of those issues could be fixed with a few additional programs.

Robot Virus

Marco is a boy around 12 years old, who is very interested in coding and viruses. His family is very poor because his mother died due to a mine collapse. His dad was a gas filler for jets, until one day, he had been informed that he had been replaced. Robots in the workforce took his place. From that day, Marco was convinced, that he needed to destroy robots once in for all. He decided that he was going to attach a computer virus to the computer program, Python. But, Marco had no idea, what the robots would do next.
